March 2026

Hiring Manager
Manulife Financial
Toronto, ON

Re: Senior Analyst, Health Analytics & Insights

Manulife Financial administers group benefits for 4.5M+ Canadians across EHC, dental, disability, and life insurance. Manulife's Vitality health management platform and predictive HCM (Health and Care Management) analytics create a distinctive demand for data analysts who can bridge claims analytics, behavioural health engagement, and actuarial pricing signals.

I am applying for the Senior Analyst role within Manulife's Health Analytics and Insights team. My portfolio addresses two of Manulife's core analytics domains: EHC claims PMPM trend surveillance with paramedical utilization p-chart analysis, and HCM predictive model AUC monitoring with care navigator escalation c-chart tracking. The HCM predictive analytics project directly mirrors Manulife's Vitality-informed care management workflow - identifying the point at which model drift triggers clinical intervention escalation, and quantifying the intervention effect on downstream claims cost. I have applied XmR, p-chart, and c-chart SPC methods using Python, grounded in Canadian group benefits frameworks including CLHIA paramedical fee schedules, ODB drug benefit data, and Beers Criteria high-risk medication standards. I am relocating to Toronto and available immediately. I would welcome the opportunity to contribute to Manulife's health analytics mandate.

Sincerely,

Nicholas Steven
